◆ Keep pressing the [PTT] button to initiate an internal call to other devices in the current channel, and release the button to end the call.

5.2 TALK mode call

◆ Press the [TALK] button once, and you can initiate an internal call to other devices in the current channel without pressing it all the time. Press the button again to end the call.

◆ When the device does not initiate a call, if another phone initiates a call, the device will hear and play the sound.

6.Software installation and connetion

6.1 Software download

◆ Log in to www.nayatec.com website, find the corresponding product model in the technical support, and download the corresponding driver and configuration software according to the tutorial.

6.2 Driver and software download

◆ Install the downloaded driver file "PL2303_64bit_Installer.exe".

After the installation is successful, plug the data cable into the computer and check the port number in the device manager.

◆ Install the downloaded configuration software, following the installation steps (Windows 7 system is recommended)

6.3 Connection hints

◆ After the driver and software are installed, connect the handheld to the computer as shown below. The data cable is a specially customized cable and cannot be replaced by a charging cable.

Dedicated data able

7.Software usage

7.1 Open the software

◆ After the installation is complete, run the PniHtCfg**.**exe file**.** After opening the software, the following figure is shown**.** The setting interface is all gray and cannot be edited before selecting and opening the port**.**
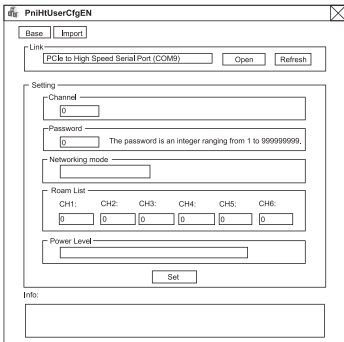

◆ After the setting software is opened, select the corresponding serial port number, and then click to open the port, the software interface becomes editable condition.

◆ Turn on the handheld at this time (if it is already turned on, simply turn it off, and then turn it on again). After the handheld is turned on, "connection successful" appears in the software information bar, indicating that the connection is successful.

◆ After the handset is successfully connected, it will automatically obtain the parameter information currently set. Modify the parameters according to the needs.

◆ After that, click "SET" to complete the setting operation.

7.2 Fixed channel setting

◆ The fixed channel parameter corresponds to the channel setting of the handheld. Only handheld or repeaters under the same channel can communicate with each other.

7.3 Communication password

◆ Under the same channel, the communication password is required to be the same. Under the same channel but with different communication passwords, you cannot communicate with each other. Modifying the communication password of all handhelds and repeaters for communication. This function is often used to prevent eavesdropping with same frequency

7.4 Networking mode

◆ Fixed channel and roaming switching mode are optional as networking mode. For specific function descriptions, please refer to the handheld network mode setting.
